We use additional third-party analytical cookies to understand how you use GitHub.com so we can create the best products. You can always update your choices by clicking on Cookie Preferences at the bottom of the page. For more information, see us that we use important cookies to perform the main functions of a website, such as logging in. Find out more Always Active We use analytical cookies to understand how you use our websites so we can make them better, for example, they are used to gather information about the pages you visit and how many clicks you need to accomplish the task. Find out more This is my solution for all programming assignments and machine learning quiz (Coursera) taught by Andrew Ng. Once you've completed this course, you'll get a broad understanding of machine learning algorithms. Try to solve all the tasks yourself first, but if you're stuck somewhere, then feel free to browse through the code. Find out more 21 overall results for machine learning Andrew ng Learn the work of relevant skills that can be used today in under 2 hours through an interactive experience guided by the subject of an expert. Get access to everything you need right in your browser, and complete the project confidently with step-by-step instructions. Prepare courses for the world's best teachers and universities. Courses recorded automatically graded and peer-reviewed assignments, video lectures and community discussion forums. Once the course is complete, you will be eligible for an e-course certificate for a small fee. Sign up for a specialty to master a certain career skill. You will take a number of rigorous courses, sort out practical projects and get a certificate of specialization to share with the professional network and potential employers. Whether you want to start a new career or change your current, Professional Coursera Certificates, you can get ready for work. Learn at your own pace from leading companies and universities, apply your new skills to practical projects that demonstrate your expertise to potential employers, and earn career credentials to start your new career. With MasterTrack™ Certificates, parts of the master's program have been divided into online modules, so you can earn high quality university career credentials at a breakout price in a flexible, interactive format. Benefit from a deeply attractive learning experience with real projects and live, expert instructions. If you are accepted into a full master's program, your MasterTrack coursework counts on your degree. Transform your RESUME with a degree from a university for a breakthrough price. Our modular degree learning experience gives you the opportunity to learn online at any time and earn credit as you complete your course assignments. You will receive the same powers as students who attend classes on campus. Degree courses cost much less than comparable programs on campus. Machine learning is the science of computers operating without explicit programming. In the last decade, machine learning has given us self-driving cars, practical speech recognition, effective Internet search, and vastly improved understanding of the human genome. Machine learning is so widespread today that you will probably use it dozens of times a day without knowing it. Many researchers also believe that this is the best way to make progress towards the human level of AI. In this class, you'll learn about the most effective machine learning methods, as well as get the practice of implementing them and make them work for yourself. More importantly, you will learn not only about the theoretical basics of learning, but also learn the practical know-how needed to quickly and powerfully apply these methods to new challenges. Finally, you'll learn about some of Silicon Valley's best practices in innovation, as it relates to machine learning and AI. This course provides a broad introduction to machine learning, data processing, and statistical pattern recognition. Topics include: (i) controlled learning (parametric/non-marathon algorithms, vector support machines, nuclei, neural networks). Uncontrolled (clustering, reducing dimension, recommendation systems, deep learning). (ii) Best practices in machine learning (bias/variance theory; innovative process in tuition and AI). The course will also draw on numerous case studies and applications, so you will also learn how to apply learning algorithms to create smart robots (perception, control), text understanding (web search, anti-spam), computer vision, medical informatics, audio, data mining, and other areas.
