My Olivetti Underwood letter 32 came up with it's instruction manual. Well, not really a guide as much as a help card. It seems to be as comprehensive as any other typewriter manual I've seen though. It's on hand to be because the scheduling system on message 32 is at least as unpredictable as on hermes 3000. I scanned it at relatively high resolution (200ppi, about 1250 pixels) and downloaded the scan here. Right-click and save with a name to download images for printing. They're kind of scrunched but still readable at 800 pixels wide on this page. Features: Portable hand-typewriter. Keyboard: 43 keys, matched 86 markers. Tape: At a height of 13 mm fabric; Column: Present. Line spacing: Three positions plus zero. Serial number: On the right side of the window. Production: Since 1963.Bodywork: Metal with removable cover. Colors: blue, diasbrunn blue, yellow, green, and red, with smooth painting in the first versions, embossed in the following versions. Design: Marcelo Nizzoli.Note: This model has been produced for more than thirty years to get great sales success. Letter 32 was produced with small mechanical and aesthetic differences in Italy, Spain, Yugoslavia and Mexico, and the main characteristics of the different versions are: - Versions: right side of low aluminum cart, Olivetti mark on the rest of the paper, letter 32 mark above the keyboard, aluminum arm spacing line; - Version II: (since January 1967) The right side of the high aluminum cart, Olivetti plate character 32 above the keyboard, aluminum crane spacing line; - version iii: the right side of the high black plastic cart, Olivetti letter 32 above the keyboard, plastic spacing lines crane; - letter 62 (since 1988) of red color. Original file name: INSTRUCTIONS.pdfAuthor: Leonardo Ranieri Cagnola This PDF 1.5 document was created by Microsoft® Word/Press Office 2007, and posted on file-pdf.it on 09/03/2017 at 8:12 p.m., from the IP address 91.253.x.x. File size: 114 KB (2 pages). Privacy: General file instructions for the typewriter Olivetti Letter 32 typewriter consists of: - Bodywork; - Frame; - Mechanics; hammer box; - cart; - keyboard. Who is made of bodywork of metal, is that the outer casing that decorates and maintains inside all mechanical parts of the machine, the top is removable. The frame is a collection of metal pieces that are located on all parts that must be supported. Not seen, but inside. Mechanics are given by all pieces capable of moving through levers and manual strength. It also includes a hammer tray that is specifically supported by the kind of hammers that will go to beat the The cart is the part that moves while writing thanks to spring and that makes hammers in the right place. You should insert a sheet on it. The keyboard is a set of arms and buttons in front of the writer. The capital switch switch returning 0e1 free color fringe specified plastic keys is connected to levers and hammers (kinmi system) visible in front of the cart with the letters, numbers or symbols indicated. The computer keyboard is slightly different from that of typewriters, for example Z and W are reversed, and M is close to L and not to N, as well as the order of other symbols such as brackets, apostrophes ... To enlarge or use the second top code on the key, you must press the large key (the button that, when pressed, lowers the hammer tray). To write a capital word or phrase, you can press the big hard key above the capital letters button. To remove the function, press the big key to undock the block. Be careful not to accidentally hit unwanted letters or symbols in lock press. If you type a sentence in capital letters and you insert the upper comma, you'll need to disengage in the block otherwise you've printed the number 4. You should also be careful to write punctuation correctly. You must write two points, the interval, and the interval naturally, for the period for which you must press the capital letters; If it happens to be wrong you can go back with the return button and print the character overtime. Number 0 and 1 do not exist and must therefore be written with the big letter O and the small letters L respectively. The right position and correct writing are important for writing quickly without getting tired. You will have to do a good workout to learn well. Indicators should be developed on F and J. The remaining fingers went to D, X, A, K, L, M. You can change color through a lever on the right. White, in between, works to hit without ink on the matrix of cyclo rice paper which works to make more copies, or to clean hammers. If you reach the end of the line and a letter or two is missing, after the bell sound and lock the cart, just press the button before the number 2 called the free margin, this Tabulator applies before and after the margin. There is a scheduling, red button, which moves the cart and stops when a small hole protrudes behind it: to move this partial you have to move the stick to the left, to remove the tab is to be answered in the opposite direction. Trolley cart consists of: - rubber roller that must never be hit keys if paper is not placed; head lever that moves the roller and cart; ruler by the number of characters (about 60 per line); A Margin per margin; two free carts that allow you to move the cart in any sense; V; set up the spacing of lines between 0, 1, 2 and 3 (floating roller, transmission character, 2, 3, 4); two cylinder handles, one on the right and one on the left, the latter with a clutch to move the line a little (you must press the button in the middle and then move the cylinder). Insert paper 01, 02, 03, 04, 05. Insert the paper and slide up about half, open the free paper and pass the paper under the stop sheet. Close the free paper and pass the paper under the cutter. Change the direction of the tape and change the coil to change direction: it is automatic but if it gets stuck because it is kneading or not go, open the top cover, move underwire which holds the tape after a small cylinder (both moved together), and also move circ from the coil underneath it (to understand enough to see the iron wire that is close to its predecessor). Coil Changer: Open the top cover, unscrew the two knurled knobs to pull the coil and replace it with new ones (it should only be done when it is consumed or without ink; the order and path of the tape must be maintained). Sometimes oil and cleaning the mechanical parts for proper operation. Use the permanent link to the document download page to share the document on Facebook, Twitter, and LinkedIn.
